

# NEW Underground Service Costs

The utility provides an overhead service and a transformer to residential customers at no charge as part of our service model.

All underground services are installed at the request of customers or are in areas requiring underground electrical service by design.

Due to increases in material costs for underground service installation it has become necessary to increase those costs.

*We propose to increase the cost for a 200 Amp service to \$900.00 for the first 100' and \$9.00/ft for any additional distance over that. This service is currently costing the Utility \$12.44 per 100'.*

*We propose to increase the cost of a 400 Amp service to \$1000.00 for the first 100' and \$10.00/ft for any additional distance. This service is currently costing the Utility \$13.93 per 100'.*

**Additional charges will apply due to any obstructions, sidewalks, and/or driveways**

**Approved by Edenton Town Council 3/14/2023**
